The pattern

You are strongest in restorative and weakest in pediatric.

5 of 8 restorative answers name you, against 1 of 8 pediatric answers. That is where the first page goes, because pediatric is the category where AI has an answer to give and you are not in it.

SAMPLE REPORT - EXAMPLE DATA, NOT A REAL PRACTICE

The 90-day publishing plan

Every action, who does it, and how long it takes

MARKET	MEASURED	SCOPE
Austin	November 16, 2026	40 questions x 4 engines

Every fix, in order

7 actions identified

Competitive position — Content Agent + Citation Agent — 2 weeks
Build comparison and service pages that cite the same authoritative sources those rivals are cited from.

Content structure — Content Agent — 1-2 weeks
Publish one page per priority treatment, each with its own schema, FAQ and internal links.

High-intent visibility — Content Agent — 1 week
Build service pages that directly answer the top 5 missing prompts, plus a neighborhood page for the practice's primary area.

Structured data — Schema Agent — 1-2 hours
Deploy Dentist + MedicalProcedure schema on the homepage and every service page.

Citation consistency — Citation Agent — 1 week
Reconcile name, address, phone, hours and services across these sources so they match exactly.

Review velocity — Practitioner action — 1 hour, practice side
Have the practice trigger a review request from its own scheduling system after each appointment. We do not send patient messages.

Metadata — Content Agent — 10 minutes
Write a 150-160 character description naming the practice, city and primary treatments.

The 90-day sequence

what ships and when

DAYS 1-30

Foundations

- Schema and entity setup
- Directory reconciliation
- Measurement baseline locked

DAYS 31-60

The pages

- Priority service pages
- Comparison and location pages
- FAQ and internal links

DAYS 61-90

Authority

- Citation sources earned
- Review velocity from the practice
- Second baseline and review

What we need from you

about 10 minutes, once

- Approval to publish on your site (we draft everything, you click publish for 90 days).
- Confirmation of your hours, services and insurance mix so the pages are accurate.
- One person who can answer patient-facing questions - usually the office manager.

SAMPLE REPORT - EXAMPLE DATA, NOT A REAL PRACTICE

Methodology

- 160 checks were run: 160 questions across chatgpt, gemini, perplexity, claude.
- Every answer was requested with the same city, the same wording and the same competitors, so week to week moves are real changes, not noise.
- We measure whether your practice is named. We do not promise a ranking, and no one else can either - AI answers vary by model, query, location and time.
- No patient data is ever requested, stored or processed. This report contains only public information about your practice.

What we publish for you

- One service page per priority treatment, each with its own schema, FAQ and internal links.
- Corrected practice details across the directories that AI reads most.
- A weekly re-measurement so you can see the number move, not a promise about it.
- A monthly report in the same format as this one.
- Nothing is published to your site without your approval for the first 90 days.

What we need from you

about 10 minutes, once

- Approval to publish on your site. We draft everything; you click publish for the first 90 days, then we ask before anything goes live.
- Confirmation of your hours, services and insurance mix, so the pages are accurate.
- One person who can answer patient-facing questions - usually the office manager.

Ready to start?

Reply to this email and we will run the first month: measurement, the pages, the schema, and the weekly report - with your approval on every publish.
